Quality Management

ALFALFA IN PIG DIET, A SUSTAINABLE SOLUTION FOR SWINE INDUSTRY

Alfalfa in swine ration improves both pig health and pork meat quality.

Using alfalfa in pig feed reduces food competition between humans and livestock.

REPRODUCTION

Alfalfa in sow feed increases intestinal water retention, **improves gastrointestinal motility** and reduces issues related to constipation, commonly experienced during pregnancy, gestation and delivery. Irritability, behavioural problems and difficult or **fatal deliveries are decreased.**

GROWING

Alfalfa improves **piglets' immunity**, boosts resistance to intestinal viruses and contributes to maintain the balance of intestinal flora, **enhancing health** and **facilitating growth.**

DISEASE RESISTANCE

Alfalfa enhances pigs' **health** and growth performance thanks to its antioxidant action and flavonoids, which have beneficial physiological effects against cancer and **reinforces the immune system.**

WHY ALFALFA IS IDEAL FOR POULTRY FEEDING

- thanks to the content of xanthophylls, alfalfa is a natural pigment for yolk and meat
- a molting diet rich in alfalfa reduces the Salmonella in hens' feces
- alfalfa flavonoids have positive effects on broiler performance, meat quality, and gene expression

WHY ALFALFA IS PERFECT FOR RABBIT FEEDING

- alfalfa fiber protects rabbits' intestinal microflora and their whole digestive system
- alfalfa boosts the rabbits' immune system protecting against pathogens
- alfalfa betacarotene protects reproductive system and keeps eyes bright

ALFALFA BASED FEEDING RATION FOR DAIRY AND MEAT SHEEP AND GOAT

- alfalfa enhances rumen conditions and increases milk output
- feeding alfalfa to meat sheep and goats increase long chain fatty acids omega 3, and the quality of meat
- with alfalfa inclusion in the ration, animals achieve better feed ration conversion
